

AI radiology startup Synapsica partners with Aarthi Scans and Labs

12 May 2022 | News

The automated preliminary reporting of spine MRIs by Spindle to help Aarthi Scans save 70 per cent time of radiologists

AI radiology company Synapsica has partnered with Aarthi Scans and Labs, a multi-centre diagnostic chain with 40 full-fledged diagnostic centres and 75+ collection centres conducting over 900 MRI scans every day. As a part of the agreement, Synapsica will deploy its unique AI assistant 'Spindle' to power spine MRIs for the diagnostic chain.

Synapsica's Spindle is the first algorithm globally to automatically report over 35 degenerative (age-related) pathologies in MRI scans of the spine. It can generate highly objective and accurate radiology reports with necessary spinal measurements and help reduce the time spent by radiologists on spine MRIs by almost 70 per cent.
