Terumo India partners with Argon Medical to expand portfolio

19 May 2022 | News

To include end to end solutions for Interventional Radiology, Vascular Surgery, Interventional Cardiology and Clinical Oncology

Terumo India, the Indian arm of Terumo Corporation, has signed a partnership agreement with US-based Argon Medical, the market leader in specialty medical products, including guide wires, IVC filters and retrievals, bone and soft tissue biopsy needles and other products in India.

Terumo and Argon have complementary portfolios, enabling Terumo to offer advanced medical solutions, providing support from diagnosis to treatment across the patient-care pathway.

There is a significant unmet need to provide the latest technologies and tools for procedures such as Biopsies, AV Access and Deep Vein Thrombosis treatments. Argon’s portfolio comprising Biopsy, Thrombectomy and IVC Filters and Retrieval kits is expected to help bridge this gap for the Indian market.

Making the announcement, Shishir Agarwal, MD of Terumo India, said, "Bridging the industry gap in providing patient focused solutions for healthcare providers is a priority for Terumo. We are delighted to introduce Argon products in India, which represent the gold standard for Biopsy Devices and complements our portfolio of Vascular Solutions, Access and Core Products.”
