

IHL introduces health pod

21 May 2022 | News

The 'hPod' offers a non-invasive digitally-integrated ecosystem that enables primary, preventive and predictive Healthcare

India Health Link (IHL) has introduced a first-of-its-kind connected 'human-centric' Phygital (physical+digital) screening ecosystem, which includes the award-winning ATM size 'made in India' Health Pod (hPod) for zero assistance automated vitals screening. The Health Pod also complements National Digital Health Mission (NDHM) as it creates personalised Health accounts and IDs in line with the ABHA account.

"The 'hPod' offers a non-invasive digitally-integrated ecosystem that enables primary, preventive and predictive healthcare. This is a self-service, walk-in Health Pod wherein individuals can get their screening done for 22+ health vital parameters including BP, Weight, SpO2, BMI, BMC, Pulse, Temperature, and ECG within 5 minutes followed by an instant report, without any paramedic assistance. The hPod is HIPPA compliant and features medical devices certified by US FDA, CE, and Neumetric," says Dr Satyender Goel, Founder & CEO, IHL.
