Genes2Me launches CoviEasy at-home self-test

13 June 2022 | News

The IVD product delivers high level of sensitivity and concordance of more than 98 per cent accuracy

Gurugram-based Genes2Me has launched CoviEasy Self-Test Rapid Antigen test kit for COVID-19 that gives results in 10 minutes. Backed by an AI-driven mobile app, the IVD product delivers a high level of sensitivity and concordance of more than 98 per cent accuracy.

CoviEasy has undergone stringent quality checks at ICMR approved validation centre and further received approval from CDSCO India. CoviEasy test can be easily performed by following simple instructions provided on the mobile app leading to automated reporting of test results from this mobile app itself.

The CoviEasy test involves couple of easy and simple steps as is conducted with a nasal swab sampling, wherein the swab first need to be inserted in the nostrils. The swab needs to be dipped in the buffer tube and swirl 8-10 times in the extraction buffer. The Buffer is then dropped onto the CoviEeasy test device which shows test result as either positive or negative. The test device also comes with a unique QR code for unique patient data entry and accurate report generation.
