Ambee, VitalFlo to provide respiratory health monitoring solution

21 June 2022 | News

Clinicians can forecast potential environmental triggers and adjust patient action plans accordingly

Bengaluru-based Ambee, a global platform for hyperlocal environmental data, has partnered with US-based digital health company VitalFlo, to provide air quality data and respiratory health monitoring solutions.

VitalFlo is a digital health company that helps clinical teams measure and monitor the respiratory health of their patients. Using environmental data collected by Ambee, VitalFlo enables clinical teams to provide proactive and responsive management of respiratory diseases and conditions. Through advanced trends, patient status alerts, and detailed analytics, clinicians can forecast potential environmental triggers and adjust patient action plans accordingly, improving the quality of life for all those afflicted.

Ambee’s air quality data helps visualise and quantify ambient air pollution at any given location, down to the postcode and neighbourhood level.
