

United Way of Bengaluru, Thermo Fisher set up 30-bed modular facility in Nagaland

27 June 2022 | News

The modular facility has been designed by Modulus Housing, a start-up from IIT Madras

United Way of Bengaluru and CSR partner Thermo Fisher came forward and set up a 30-bed modular facility, type C ambulance, dental and paediatric medical equipment as an extension to the existing community health centre in Tobu Block of the Mon District in Nagaland. This modular setup has been equipped with advanced medical equipment that would benefit patients as well as the medical fraternity.

The 30-bed modular facility has been designed by Modulus Housing, a start-up from IIT Madras. These units have long durability, for at least 20 years.

The Tobu Block required a medical facility to cater to 32 villages with a population size of over 50,000. The area had only five Public Health Centres (PHC), four sub-centres, and four health and wellness centres.
