

BeatO unveils diabetes care prog

29 June 2022 | News

The programme will help to control and reverse diabetes

BeatO, a digital app-based platform, has launched its clinically proven, doctor-led comprehensive Diabetes CARE Programs. The programme has been designed for people with pre-diabetes and Type II Diabetes—those who are newly diagnosed or have long-standing diabetes with related health complications.

The programme provides members with structured, proactive and supervised counselling led by doctors and health experts. It aims to bring positive health outcomes through a virtual medical team of leading diabetologists and health coaches. It also helps the members in significant savings of up to Rs 6000 (~30-50 per cent) annually on their diabetes expenses comprising consultations, medicine, monitoring and test expenses.
