Connect2MyDoctor launches 3D/AR Tool cARe

30 June 2022 | News

The new 3D/AR tool is set to revolutionise patient education

Telehealth startup Connect2MyDoctor has launched cARe, a 3D/AR module for patient education on its virtual care platform. cARe, the web and mobile app-supported tool can play a crucial role in telemedicine, enabling an easier explanation of anatomical structures and physiological mechanisms to a layman than a mere video consultation. One important advantage that cARe has, is in helping patients and their families understand the details of a medical procedure beforehand.

cARe can be used for patient education both during in-person and teleconsultations, Continuing Professional Development (CPDs), Virtual Tumour Boards (VTB), Medical Colleges etc. These modules can be integrated and used both for OP and virtual care.
