

Aakash Healthcare sets up 'Cure c 3D' lab at Dwarka headquarters

14 July 2022 | News

The lab will assist surgeons and clinicians in developing 3D models of complex clinical cases for patient education, surgical treatment planning

Aakash Healthcare has established a 3D printing facility in its Dwarka headquarters. The lab, known as Cure c 3D, will assist surgeons and clinicians in developing 3D models of complex clinical cases for patient education, surgical treatment planning, and the creation of patient-specific jigs and other medical devices that will enable accurate and safe surgical interventions, such as those in complex spinal deformities.

The lab has a cutting-edge Polyjet printer called the STRATASYS J5 that can create models in several colours and materials. The revolutionary 3D printing technology will produce high-quality models for patient education, resident lectures, and in vitro/outside OT practice of complex surgeries.
