Parul University joins hands with Wolters Kluwer to deploy clinical decision support systems

02 August 2022 | News

The technology will be available to the students and faculties at Parul University to provide them the experience of evidence- based medicine

Gujarat-based Parul Institute of Medical Sciences & Research, a constituent college of Parul University and recognised by National Medical Commission, has announced its association with Wolters Kluwer.

As a part of this collaboration, Wolters Kluwer has deployed its Clinical Decision Support Systems, at its institute to further enhance the quality of their evidence-based care delivery. The three products that have been deployed by the institute are UpToDate, UpToDate Advanced and Lexicomp.

To make quality care more accessible and enhance the knowledge of using technology in healthcare to improve patient outcomes, Parul University, has chosen UpToDate and Lexicomp as a partner of choice for its institute. Wolters Kluwer will conduct regular workshops to equip the students and faculties on the effective use of these products for better patient care.

The clinical decision support systems (CDSS) provide clinicians with verified information within a few clicks, facilitating faster diagnosis. With CDSS, doctors can bookmark topics for easy access to information when they need it. It improves patient outcomes and results in better quality health care. A CDSS alerts the doctors to potential problems that can be easily resolved. It supports clinicians while making complex clinical decisions.

By providing students with comprehensive medical education and sufficient clinical experience through CDSS tools like UpToDate, we can help prevent medical errors.
