

Health-tech startup Humors Tech raises \$70k in pre-seed round

06 October 2022 | News

Humors Tech intends to use the funds to expedite its clinical research study

We Founder Circle (WFC), an early-stage startup investment platform led by a global community of successful founders and strategic angels, along with the WFC VP has announced leading the pre-seed round worth Rs 54 lakh (\$70k) raised by Humors Tech.

Humors Tech is founded by IIIT Alumni in 2021 to develop innovative products for Home Healthcare. The primary aim of the startup is to combine its expertise in Artificial Intelligence, Deep Tech, and IoT with clinical research to create innovative yet simple-to-use healthcare platforms.

In absence of any professional support, Humors facilitates a unique non-invasive breath technology to detect the early onset of critical diseases such as heart issues, kidney issues, liver issues, lung issues, and diabetes with accurate health screening on multiple parameters.

In India, the absence of affordable tests and accessible technologies for routine medical checks results in the late diagnosis of critical ailments. Additionally, due to the lack of knowledge about health and wellbeing, we only go to the physician when the disease starts presenting alarming and unbearable symptoms. Moreover, the growing geriatric population & dependency ratio in India is further expected to drive the demand for home healthcare. "Seeing Humors Tech's capabilities to be a game changer in this sector, we have invested in the startup and we pledge to endorse its mission in all aspects," said, Neeraj Tyagi, Co-founder, We Founder Circle.
