

Max Ventilator rolls out new intelligent medical devices

14 October 2022 | News

Innovative pulse oxymeter, monitors, and ECG among newly launched devices

After conquering the terrain of ventilator market, leading manufacturer of medical devices from Vadodara, Max Ventilator is all set to expand its niche by rolling out intelligent devices including pulse oxymeter, ECG, and monitors. Sensing the need for smart and innovative devices in the healthcare sector, the company has come up with solutions that offer world-class quality at an affordable cost.

“The pulse oxymeter is an economical choice against the usual price range in the market. Having both inbuilt audio and visual alarms, it comes with a keypad that has all functions accessible. With less than 800 g of weight, the unique oximeter has a reliable memory storage of up to 96 hours where graphical trends of SpO2 and pulse rate values could be easily observed. This would greatly help the doctors in decision making when choosing the the course of medication,” said Ashok Patel, Founder and CEO, Max Ventilator.

“We are also pleased to announce the launch of two OT/ICU/CCU grade monitors: M12 and M10. The USP of the former is that it can be remotely monitored using wi-fi. A prominent feature of the latter is the versatility of the device; it is suited for a wider patient base covering neonates in addition to adult and pediatric patients. This also comes with a TFT screen for better visibility,” said Patel.

“We also have high hopes for our portable A4 ECG machine: E200. It offers an internal memory storage that can accumulate data of as many as 200 patients”, he added.
