Health tech startup Eka Care to foray into Nagpur

09 January 2023 | News

Earlier this year, the health tech firm raised $15 million in a funding round

Bengaluru-based connected health tech startup Eka Care is set to grow its presence in India by entering Nagpur. With a presence in more than 42 cities, Eka Care will now bring its comprehensive and personalised practice management platform to the doctors of Nagpur. The Eka Care platform can be customised by the doctor according to their speciality, which would make their clinical practice easier to manage and operate.

With Eka Care, doctors can manage their appointments, digital prescription, billing, lab and pharmacy services, patients' medical records, and their digital presence.

Speaking on the development, Vikalp Sahni, Founder and CEO, Eka Care, said, "We want the doctors in Nagpur to consider us as an information company and not a prescription company. We believe our technology cannot replace doctors; instead, it can aid them with the right set of information."

Earlier this year, the health tech firm raised $15 million in a funding round led by Hummingbird Ventures, with participation from 3one4 Capital, Mirae Asset, Verlinvest, and Aditya Birla Ventures. Binny Bansal, Co-Founder of Flipkart, and Rohit MA, Co-Founder of the Cloudnine group of hospitals, have also invested in the firm.
