Fujifilm India launches new range of healthcare imaging products

06 February 2023 | News

Showcased wide range of healthcare imaging solutions devices to support the radiology fraternity

Fujifilm India announced the expansion of its product and solutions portfolio at the at the 75th National Conference of the Indian Radiological and Imaging Association (IRIA). During the four-day long conference, scheduled from 2nd – 5th February 2023 at Amritsar, the company unveiled revolutionary diagnostic machines.

The new range includes ultrasound system Arietta 850 DeepInsight and Arietta 650 DeepInsight along with the new MRI machine APERTO Lucent Non DICOM printer APEOS. Additionally, the company also introduced “FUJIFILM Connect” a service & support mobile application to manage the service and support of Fujifilm healthcare products.

The APERTO Lucent is a new age, Prime open MRI device which is equipped with IP-RAPID - a modern day technique that reduces scan times while maintaining high image quality by employing under sampling and image reconstruction with iterative processing which will result in Improved image quality with higher spatial resolution.

Launched at IRIA 2023, the Arietta 850 DeepInsight and Arietta 650 DeepInsight are the latest ultrasound technology offering from Fujifilm India.

The FDX Visionary-DR launched at IRIA 2023 is a bone density scanner which will support for a wide range of solutions for Bone Densitometry and Body Composition Analysis. Also introduced at the exhibition was the APEOS medical printer which is a compact multifunction and single-function A4 Laser Printer.

As part of the event, Fujifilm India also displayed its latest healthcare medical devices like Full Field Digital Mammography (FFDM) - Amulet Innovality, Healthcare IT: Synapse PACS, USG - Arietta and FDR: X-air.
