BHU researcher finds Dr. Basu Eye Hospital's eye drops effective for cataract cure

Dr. Basu Eye Hospital has announced the results of a retrospective observational study conducted by Prof Yamini of Banaras Hindu University (BHU), Uttar Pradesh, on the use of Isotine herbal eye drops – one of the effective remedies for cataract-induced vision impairment. The study, which included 308 cataract patients treated between 2017 to 2019, showed significant improvement in uncorrected distance visual acuity (UDVA) and uncorrected near visual acuity (UNVA) after treatment with Isotine.

The study revealed that the use of Isotine eye drops for up to three months resulted in a significant improvement in the far-sightedness and near-sightedness of the patients

Prof Yamini, who conducted the study, said, "The results of this observational study are very promising and suggest that Isotine Herbal Eye Drops may be an effective treatment for cataract-induced vision impairment. Moreover, the testing of the eye drops at IIT-Bombay has also proven to be a safe and effective treatment for cataract. We hope that this study will encourage further research on the use of Ayurvedic medicine in ophthalmology."

Dr. Basu Eye Hospital has established a world-class manufacturing unit, Jagat Pharma, to ensure that Isotine Herbal Eyedrops are of the highest quality and authenticity.
