Clirnet launches Indiaâ??s first AI-powered Doctorâ??s Assistant

06 April 2023 | News

AiDA is built using the powerful AI technique called transformers

Mumbai-based startup Clirnet has announced the launch of AiDA, the Artificial Intelligence (AI) powered Doctor's Assistant. AiDA is designed to assist doctors and medical practitioners in their daily practice by providing quick, probable, and accurate diagnosis.

Built on top of OpenAI platform, AiDA is a state-of-the-art tool that leverages advanced machine learning algorithms and natural language processing techniques to support doctors in making informed decisions, minimising potential of human error, and providing the best possible care to their patients. The benefits will be reaped by doctors across India, including those practicing in the remotest areas.

AiDA in its first phase will help doctors with Differential Diagnosis (DDx) based on natural language queries, something the doctor community has sought for long. Excellent results have been obtained from the initial usage tests with doctors pan-India.

DDx will assist the doctor to make an informed diagnosis by suggesting a list of medical conditions (with associated probabilities) that share the same symptoms. Requiring minimal tech skills, AiDA will help doctors achieve diagnostic excellence. This will create a deep positive impact on patient outcomes and reduce mortality.
