

Amazon Web Services to inject Rs 1,05,600 Cr into cloud infrastructure in India by 2030

18 May 2023 | News

Planned investment will contribute Rs 1,94,700 crore (\$23.3 billion) to the GDP of India by 2030

Amazon Web Services (AWS) has announced it plans to invest Rs 1,05,600 crore (\$12.7 billion) into cloud infrastructure in India by 2030 to meet growing customer demand for cloud services in India.

This investment is estimated to contribute Rs 1,94,700 crore (\$23.3 billion) to India's total gross domestic product (GDP) by 2030. This planned investment in data centre infrastructure in India will support an estimated average of 1,31,700 full-time equivalent (FTE) jobs in Indian businesses each year. These positions, including construction, facility maintenance, engineering, telecommunications, and other jobs, are part of the data centre supply chain in India.

This follows AWS's investment of Rs 30,900 crore (\$3.7 billion) between 2016-2022, which will bring AWS's total investment in India to Rs 1,36,500 crore (\$16.4 billion) by 2030. AWS's investment in India has a ripple effect in the local economy in areas, such as workforce development, training and skilling opportunities, community engagement, and sustainability initiatives. See more details [here](#).

AWS has two data center infrastructure regions in India – the AWS Asia Pacific (Mumbai) Region, launched in 2016, and the AWS Asia Pacific (Hyderabad) Region, launched in November 2022.

Hundreds of thousands of customers in India run their workloads on AWS to drive cost savings, accelerate innovation, and increase speed time to market. This includes government entities such as Ministry of Electronics and Information Technology, and public healthcare institutions like Aarogyasri Health Care Trust.
