Lupin launches worldâ??s first fixed-dose triple combination drug for COPD management in India

23 November 2023 | News

Uniquely combines Vilanterol, Fluticasone Furoate and Glycopyrronium Bromide

Mumbai-based pharma major Lupin Limited has launched the world's first fixed-dose triple combination drug (FDC) under the brand name Vilfuro-G® for the effective management of chronic obstructive pulmonary disease (COPD) in India.

This milestone follows the approval granted by the Drug Controller General of India for the Dry Powder Inhaler (DPI) product.

Lupin Vilfuro-G® is the only FDC that uniquely combines Vilanterol, Fluticasone Furoate and Glycopyrronium Bromide, for the long-term management and treatment of moderate to severe COPD.

The product is available in a single-strength fixed dose, with a recommended once-daily dosage. This therapeutic innovation by Lupin brings hope to more than 37 million individuals struggling with COPD in India, a condition that ranks among the leading causes of death and disability in the nation.

"As the global prevalence of COPD continues to surge, India bears a significant 18% of this disease burden. With our extensive respiratory portfolio and the approval of Vilfuro-G, we take immense pride in offering healthcare professionals and patients with innovative treatment solutions," added Rajeev Sibal, President – India Region Formulations, Lupin.
