BioLabs and Promega collaborate to support young biotech companies worldwide

13 December 2023 | News

Global exchange of knowledge between the startups and Promega scientists to play a central role

BioLabs and Promega have announced the expansion of their collaborative efforts to accelerate life science innovation worldwide through support for early-stage startup companies.

Promega GmbH in Walldorf, the German branch of global life science manufacturer Promega, will provide equipment, services and training to BioLabs Heidelberg. This initiative further establishes the Rhine-Neckar region as the centre of science innovation in Germany and strengthens the region's supportive ecosystem for early-stage startup companies.

The agreement expands the ongoing collaboration, which began in 2019, between Promega and BioLabs, a mission-driven company focused on empowering entrepreneurs and accelerating the commercialisation of life science innovation worldwide. Promega currently supports all BioLabs locations in the US and France, enabling entrepreneurs to advance their research in the field of life sciences.

BioLabs provides fully equipped and supported laboratory and office space, access to a collaborative community, and connections to a global life science network of partners to more than 250 innovative startup companies worldwide. BioLabs' capital-efficient model minimises the barriers to launch a life science startup and enables entrepreneurs to focus on research, not operations, accelerating the pace of commercial cutting-edge technologies.
