Clinisys ramps hiring in India by over 50%, creating new opportunities

31 January 2024 | News

Clinisys will add to the 350+ professionals in India who develop smart, agile technology solutions

Clinisys, a global leader of intelligent diagnostic informatics solutions, has announced its plan to ramp up hiring in India by over 50% in 2024 calendar year to support its 3,500+ lab customers around the world and further expand its global operations.

Also, the organisation has elevated Karthik Reddy, as the new Vice President to lead its technology front in India. Clinisys has consolidated its market position through strategic acquisitions and aggressive pursuit of its vision to move to cloud computing. Over the last two decades, the organisation has grown its global operations and expanded its workforce in India across technology and other business services segments.

Focused on enriching its dynamic, globally connected workforce which operates in offices across 10 countries including India, Clinisys recognises the significance of its goal to add over 50% of its workforce from India in 2024. These professionals will support Clinisys' pioneering lab informatics products and cloud transition initiative.

As Vice President of Clinisys India, Karthik Reddy will be responsible for leading all aspects of the Clinisys India development expansion, including partnering with cross-functional teams to increase overall product delivery efficiencies, grow lab expertise locally, drive innovation and enhance customer support response time. Karthik will also provide leadership around organization structure, budget controls, recruiting, training, and other business imperatives within Clinisys India.

Reddy has been a senior healthcare technology, product and operations leader in North America for the last 12 years and has relocated to Bangalore with his family to lead India operations.
