Medulance unveils Indiaâ??s first 5G-enabled â??Smart Medical Roomâ?? in Gurugram

09 February 2024 | News

Launching a mediclinic to do a lot more for a patient

New Delhi-based startup Medulance, a leading emergency medical service provider, has launched India’s first 5G-enabled ‘Smart Medical Room’ in Gurugram, a game-changer for corporate health and wellness due to its swift response to emergency care with 5G connectivity.

The medical facility was launched at Good Earth Business Bay II, Gurugram by the Directors of Good Earth Business Bay, Vidur Khurana, and Meeta Khurana, and Medulance founders Pranav Bajaj and Ravjot Arora.

The Smart Medical Room ensures enhanced corporate wellness as it offers state-of-the-art diagnostic tools, telemedicine capabilities, and real-time monitoring systems, empowering corporations to prioritise employee health and well-being like never before. Utilising 5G connectivity, Smart Medical Rooms, and Advanced Life Support Ambulances facilitate rapid communication and data transfer, reducing response times to under 4 minutes.

Research indicates that companies with on-site medical rooms see a 59% increase in employee attraction and retention, a 63% decrease in missed work days, a 63% drop in emergency room visits, and a 64% reduction in healthcare costs.

By facilitating early diagnosis and screening, initiatives like Smart Medical Room not only contribute to improved health outcomes but also mitigate healthcare expenses. Moreover, they serve as a cost-effective means to promptly address workplace emergencies and support employees' healthcare needs. Complementing this initiative, medical rooms within corporate settings serve as dedicated spaces equipped to handle immediate health concerns, first aid, and even teleconsultations.
