

## Fujifilm unveils Lung Navigation - Synapse 3D technology in Kochi

13 May 2024 | News

Synapse 3D is equipped with specialised technology which identifies three optimal paths leading to a lung lesion

Fujifilm India has introduced its latest innovation in lung navigation, Synapse 3D, during the Amrita Bronchoscopy & Interventional Pulmonology event held in Kochi on 12th of May.

Synapse 3D represents a groundbreaking advancement in pulmonary imaging and diagnostics. Leveraging state-of-the-art 3D technology, this device offers unparalleled precision and insight into pulmonary conditions, empowering healthcare professionals with the tools they need to deliver optimal patient care.

The Amrita Bronchoscopy & Interventional Pulmonology (ABIP) event served as a prominent platform for industry leaders, healthcare professionals, and innovators to convene and exchange insights on the latest advancements in pulmonary care. With a focus on interventional techniques and emerging technologies, the event facilitated discussions, workshops, and live demonstrations, providing attendees with valuable opportunities to enhance their knowledge and expertise in the field.

Synapse 3D is equipped with specialised technology that identifies three optimal paths leading to a lung lesion. With the help of radial EBUS, the doctor can have better yield which ultimately helps in precise diagnosis for timely intervention. A bronchoscope simulation is performed along the path, helping to visualize difficult procedures before performing an invasive exam. This will not only help in navigating the right path in lungs, but also save time and less discomfort to the patient with better diagnosis.
