Bversity announces 1-year hybrid post graduate programme in bioinformatics in partnership with Atria University

20 May 2024 | News

For imparting essential skill sets required for immediate entry and success in the biotech industry

In a pioneering move for biosciences education, Bversity, the first-of-its-kind virtual college specialising in Biosciences, has announced the launch of its flagship 1-year hybrid Postgraduate Programme in Bioinformatics in partnership with Atria University, Bengaluru which is now set to commence in August 2024.

Designed to bridge the gap between academic learning and industry demands, Bversity's programme is crafted to cultivate the next generation of biotechnology leaders, fully equipped to thrive in a rapidly evolving global bioinformatics landscape.

Unlike traditional 2-year Master’s programmes, Bversity offers a condensed, intensive 1-year postgraduate programme that focuses on imparting essential skill sets required for immediate entry and success in the biotech industry.

Candidates can specialise in Bioinformatics, Genomics and Data science, which is aligned with the sector's most pressing needs and future directions.

"The essence of our Postgraduate Programme lies in revolutionising traditional educational paradigms to foster a deep connection with the biotech industry," stated Sudharsan Varadharajan, CEO & Co-founder of Bversity.
