Deep tech startup 8chili receives investment to lead way for healthcare workforce training

21 May 2024 | News

Karna D Shinde invests in 8chili pioneering immersive technology for workforce training

In a recent announcement, 8chili, a deep tech company based in California, US and Bengaluru, India, has announced a significant investment from strategic investor and mentor Karna D Shinde. This investment marks a milestone in 8chili's journey as it continues to lead the way in immersive technology for workforce training.

8chili is renowned for its innovative VR platform, HintVR, designed to deliver immersive training experiences for quality and compliance needs in healthcare and life science sectors.

HintVR is an end-to-end enterprise platform powered by SDK, enabling organisations to create 3D training simulations 80% faster than traditional methods. The platform has demonstrated tangible results, including reduced error rates and faster competency times, as evidenced by multiple case studies.

8Chilli has partnered with customers in the Healthcare and Life Science industry, like Strides Pharma and Apollo Hospitals, that have recognised the value of 8chili’s offerings and have implemented the company’s solutions in their operations. This validation from industry leaders underscores the efficacy and relevance of VR Training in addressing the workforce training needs.

Looking ahead, 8chili is focused on exploring strategic partnerships to expand its library of workforce training modules. These partnerships aim to empower blue-collar workers with a quality-first mindset, ultimately facilitating job placement.
