Siemens Healthineers announces local manufacturing of Multix Impact E digital radiography X-ray system

09 July 2024 | News

System to be manufactured in the Bengaluru factory, alongside mobile C-Arms, CT and MRI systems

Siemens Healthineers, a leading medical technology company, has announced that the Multix Impact E digital radiography X-ray machine will now be manufactured in India, marking a significant milestone in the company's commitment to providing better access to care for patients in the country.

According to the Institute for Health Metrics and Evaluation (IHME) 2022 data, Chronic Obstructive Pulmonary Disease (COPD), Tuberculosis (TB), and road injuries continue to be among the leading causes of death in India. An X-ray is one of the primary diagnostic tools instrumental in diagnosing bone fractures in trauma and emergency, anomalies in the chest including infectious diseases like TB and certain tumors.

The Multix Impact E is a floor-mounted system featuring all the necessary tools for easy, intuitive system operation and allows for the detection of anatomical details at low doses radiation, ensuring patient safety and quality healthcare.

Commercial availability of Multix Impact E, a locally manufactured digital radiography X-ray system for the Indian market, will enhance the general provision of secondary care for which digital X-ray is a crucial requirement. The Multix Impact E will be manufactured in the Bengaluru factory, leveraging several years of experience in local-for-local manufacturing of mobile C-arms, CT, and MRI systems.
