

Lupin divests US commercial women's health specialty biz to Evofem for \$84 M

15 July 2024 | News

Focused on commercialising SOLOSEC for women's health

Global pharma major Lupin has divested its US Commercial Women's Health Specialty Business to Evofem Biosciences, Inc., a US biopharmaceutical company focused exclusively on Women's Health.

Lupin's US Commercial Women's Health Specialty Business is primarily focused on commercialising SOLOSEC (secnidazole) 2g oral granules. This US FDA-approved single-dose antimicrobial agent provides a complete course of therapy for the treatment of bacterial vaginosis (BV) and trichomoniasis, two common sexual health infections.

Under the terms of the deal, Lupin can receive a potential total consideration of up to \$84 million based on future contingent milestones.

Dr Fabrice Egros, President - Global Corporate Development, Lupin, said, "This divestment is another step in aligning our US specialty business with our strategic plan to build our specialty business in therapeutic areas where we have building blocks of synergy. These include respiratory and neurological diseases."

"The acquisition of this commercial business aligns with and advances our mission to improve access to innovative and differentiated options that impact women's daily lives. SOLOSEC is a commercially attractive, single-dose oral antibiotic that addresses two pervasive sexual health infections. We can now fully leverage our commercial infrastructure, maximise our strong physician relationships, and re-launch an asset with tremendous growth potential," said Sandra Pelletier, Chief Executive Officer, Evofem.
