

JRS Pharma & Gujarat Microwax open new manufacturing facility in Mehsana

19 July 2024 | News

A significant step towards self-sufficiency in the Indian excipient industry

JRS Pharma, a leading manufacturer of excipients, in partnership with Gujarat Microwax, has commissioned a new manufacturing facility for cotton-based croscarmellose sodium.

This state-of-the-art plant is located in Mehsana and marks their fourth manufacturing facility in India. The grand opening ceremony was attended by heads of over 50 prominent pharmaceutical companies in the region, among other dignitaries.

JRS Pharma, known for its plant fiber technology innovations and with a legacy of 149 years, offers a comprehensive portfolio of solutions for the global health science industry. Their excipients portfolio includes high functionality excipients, binders, disintegrants, lubricants, functional fillers, thickeners, stabilisers, carriers, and coatings.

Rohit Raut, Managing Director of Rettenmaier India, the Indian subsidiary of JRS Group, said, "The excipients market in India is growing due to rising awareness of health and wellness, increasing disposable incomes, and an ageing population. Our new facility will cater to the fast-growing demand for functional excipients in India."

Manas Jhajharia, Director of Gujarat Microwax, emphasised, "The Indian excipient industry, with less than 1% market share globally, needs quality improvement to reduce dependency on imports. Our Mehsana plant operations have a world-class production facility that meets global standards for the export of quality excipients."

Alongside their extensive range of excipients, JRS Pharma also offers technical support and biopharma services to address customer needs and formulation challenges. This expansion marks a significant step towards self-sufficiency in the Indian excipient industry.
