Sciverse opens new engineering R&D centre in Pune

19 August 2024 | News

To design and develop a new generation of portable, point-of-care diagnostic device

Sciverse has announced the opening of its new Engineering R&D Centre in Laxman Nagar, Baner, Pune. This new facility marks an important step in our growth and reinforces our commitment to advancing healthcare technology.

The centre is dedicated to strengthening our capabilities in the design and development of medical devices, enabling us to deliver even more innovative solutions to the healthcare industry.

This new centre is Pune-based startup Sciverse's third major facility, following the successful launch of its Biosensor R&D Centre at Pan Card Club, Baner, last year. The addition of the engineering R&D Centre will help the company expand its team and bring in new expertise, allowing to accelerate product development and broaden our range of medical technologies.

The new Engineering R&D Centre will allow us to design and develop a new generation of portable, point-of-care diagnostic devices. These devices will be optimised for its biosensor technologies and are intended not just for the Indian market but also for export to international markets. By combining the strengths of the biosensor and engineering teams, the company intends to create integrated diagnostic solutions that meet the evolving needs of healthcare providers and patients worldwide.

Sciverse has already proven its capabilities in artificial intelligence (AI) and software by helping design some of the most successful products for Mylab Discovery Solutions.
