

Reprosci strengthens focus on medical simulation with upcoming event in Bengaluru

26 August 2024 | News

Despite its advantages, broader adoption of simulation technology faces hurdles

‘Driving Outcomes in the Health Sector with Emerging Tech’ is one of the most sought-after event being organised by Reprosi Biosciences (dedicated to revolutionising the field of reproductive medicine), in collaboration with NASSCOM and Karnataka government, to be held on 29 August in Bengaluru.

The global healthcare system faces a critical shortage of skilled medical professionals. This shortage is a major obstacle to achieving universal healthcare access. Inadequate training, difficulties in recruitment and retention, and suboptimal performance contribute to this crisis.

Bengaluru-based startup Reprosi is addressing this challenge with an innovative solution. Its advanced medical education platform provides a comprehensive training experience, combining cutting edge technology with real world simulations.

Simulation technology enhances medical product demos, improving decision-making among healthcare professionals. It integrates Virtual Reality (VR) walkthroughs and Augmented Reality (AR) overlays, offering practical insights into product use.

This upcoming event by Reprosi offers a unique opportunity to explore how emerging technologies can revolutionise healthcare training and marketing. Don't miss this chance to see the latest advancements in action!
