# Meril unveils new edge suture as benchmark in surgical precision

03 September 2024 | News

**Patented point design and silicon multi-coating ensure smooth tissue penetration with minimal trauma**

Meril, a global leader in advanced medical solutions, has announced the launch of its latest innovation, the New Edge Suture. Designed to elevate surgical performance, the New Edge Suture embodies precision, strength, and reliability, setting a new benchmark in suturing technology.

This solution by Meril is meticulously engineered to meet the rigorous demands of open, laparoscopic and robotic surgeries. It is crafted from high-grade alloy and offers exceptional tensile strength and flexibility for reliable performance.

Its patented point design and silicon multi-coating ensure smooth tissue penetration with minimal trauma, while the ribbed design provides superior grip minimising needle breakage and enhancing surgical precision and control. Additionally, thread elongation improves knot security, reducing the risk of post-operative complications.

The introduction of the New Edge Suture brings multiple advantages to hospitals and surgical teams. Its enhanced durability and precision help reduce operating time and minimise the risk of complications, leading to improved patient satisfaction and better utilisation of surgical resources. For doctors, this means a more intuitive and efficient suturing experience, which can lead to reduced fatigue and enhanced focus during lengthy procedures. This reliability translates to fewer instrument failures, enhancing the overall safety and effectiveness of surgeries.
