MD: Mr Devashish Ohri

**Business:** Manufacturer and supplier of biotech consumables and

instruments

Start-up Year: 2005

Address: First Technology Place, 3

EPIP, Whitefield, Bangalore - 560066 Tel: +91-80-41785400 Fax: +91-80-41680430 Website: www.invitrogen.com Life Technologies Corporation, headquartered in California, US, operates in India as Invitrogen Bioservices India, specializing in biotech consumables and benchtop instruments. Invitrogen India commenced operations in 2005 from Bangalore. Having acquired the Applied Biosystems agency business from LabIndia Instruments, Invitrogen has better access to a robust line of products that provide end-to-end solutions, as well as customer and

Invitrogen BioServices offers its products and solutions through three key functional divisions: Co-located state-of-

the-art facility housing commercial, research and support functions, technology driven, and global customer service division.

According to BioSpectrum estimates, company has clocked life sciences sales revenue of 12010-11kasvagainst 1240 crore in 2009-10kfrom its India operations.

In September 2010, Life Technologies signed cell line license agreements with a number of companies from across the world including Indian Immunologicals of Hyderabad to provide rights to its proprietary

CHO (Chinese hamster ovary) cell lines for the production of recombinant proteins used as therapeutic agents and vaccines.

In August 2010, Life Technologies launched its Applied Biosystems 3500 Dx Series Genetic Analyzers, the first CE IVD-marked capillary electrophoresis system for nucleic acid analysis, across Asia Pacific including India.

Mr Devashish Ohri, managing director, Life Technologies South Asia says, "Invitrogen consumables along with Applied Biosystems instruments provide a wide spectrum of solutions to meet customer needs and align with their growth strategy.

The next wave of growth will now come in applied markets relating to biofuels, diagnostics, forensics, agriculture, which according to ABLE could be 25 percent of the total biotech market size."
