AIIMS New Delhi, IIT-D and UCL announce trilateral partnership to scale up medtech innovation

24 November 2024 | News

Paving the way for devising multidisciplinary technology and innovation focused solutions across healthcare

The All India Institute of Medical Sciences (AIIMS), New Delhi and the Indian Institute of Technology Delhi (IIT-D) have launched a ground-breaking new collaboration with University College London (UCL) to co-create pioneering solutions in the field of medical technology.

For the first time, the three institutions will join forces to draw on their complementary areas of expertise to develop new technologies that help tackle some of today's biggest health challenges

The partnership, which will seek to leverage industry connections across all three institutions, will pave the way for devising multidisciplinary technology and innovation focused solutions across healthcare.

Together, the universities aim to advance the field of medical technology in cutting-edge areas such as detection, diagnostics and imaging; devices and implants; assistive technologies; digital health; artificial intelligence, machine learning and quantum; surgical and treatment interventions and sensing technologies.

The partnership will be underpinned by development of staff and student exchange, joint research programmes, collaborative degrees, workshops and conferences, and joint publications.

UCL has had longstanding bilateral partnerships with both AIIMS and IIT Delhi and this is the first time the three institutions will collectively work together across disciplines.
