

Agilent announces launch of Infinity III LC Series and New ProteoAnalyzer System in India

30 November 2024 | News

New products launched during CPHI & PMEC India event in Delhi NCR

At the 17th edition of CPHI & PMEC India, organised by Informa Markets, from 26 to 28 November at the India Expo Centre, Greater Noida, Delhi-NCR, Agilent announced the launch of two new products for the Indian market- Infinity III LC Series and New ProteoAnalyzer System.

With the introduction of these new LC systems, Agilent is revolutionizing the LC user experience. These systems significantly enhance task automation, connectivity, predictive feedback, and error reduction. The innovative built-in sample tracking, utilising barcoding and camera technologies ensures the elimination of sample mix-ups, providing users with greater accuracy and peace of mind.

"As a company we are always looking for real feedback. So, Infinity III is the outcome of the customers' voice. As we know that technology is always evolving, and we need to keep a track of the users' needs", pointed out Bharat Bhardwaj, Vice President and General Manager – APAC.

On the other hand, the Agilent ProteoAnalyzer system brings added efficiency, versatility, and reliability, particularly in protein QC workflows. Automating the separation, data processing, and simplifying sample preparation steps streamlines the analysis workflow, which improves efficiency and reduces training and related labor costs. The system also can analyse a wide range of sample types, from crude lysates to purified fractions. It can analyse different sizes and types of proteins in a single run and consistently deliver accurate results, reducing the need for time-consuming and costly reanalysis.

"Innovation has been our backbone for the past 25 years. That is why we give priority to the voice of our customers before designing our new products", said Samir Vyas, Associate Vice President, Sales - APAC.
