Medtech firm Getinge opens new Experience Centre in Mumbai

11 December 2024 | News

Helping hospitals and healthcare providers adopt advanced solutions that enhance patient care

Getinge, a global medtech company, has announced the opening of its new Experience Centre in Mumbai. Executives from Getinge with leaders from healthcare and government unveiled the Experience Centre, designed to recreate hospital and other healthcare settings including operating rooms and intensive care units.

The launch event was attended by Sven Östberg, the Consul General of Sweden in Mumbai, who highlighted the significance of this milestone in Getinge's commitment to the Indian healthcare market.

The Experience Centre showcases Getinge's innovative solutions, including the Getinge IN2 OR Modular Room System, designed to meet the evolving needs of modern surgery. The system is engineered to offer flexibility, efficiency, and highly customisable options, addressing the key challenges faced by traditional operating theaters.

"This centre will offer healthcare professionals an interactive, hands-on experience with our solutions, demonstrating how they can improve efficiency and elevate the patient experience," says Philippe Rocher, President South Asia Pacific.

Aruna Nayak, Managing Director, India, adds "The opening of our Experience Center in Mumbai is a significant step in our mission to bring world-class healthcare solutions closer to India’s growing medical needs. With our modular OR system and other advanced technologies, we are confident that healthcare facilities across the country will be able to achieve greater efficiency, sustainability, and quality of patient care. We are excited to support the healthcare sector as it adapts to the needs of modern surgery and rapidly evolving technology."

The centre will play a crucial role in helping hospitals and healthcare providers adopt advanced solutions that enhance patient care, improve operational efficiency, and promote sustainability.
