Supporting Biotech Education

Earlier, the steep cost of higher education, especially outside India, was a deterrent for many meritorious students. But the easy availability of educational loans has put the best of education virtually within everyone's reach.

Higher studies in the cuttingedge area of biotechnology is the dream of many students. Getting a foreign degree in biotechnology or for that matter any other course often boils down to the issue of money. Though financial aid is an important factor to consider, the cost of the program should not hold a student back. Banks now offer a range of loan products and specialized packages that can help them get by without financially burdening their parents.

Higher education abroad

The cost of studying abroad is significantly higher than in India and finances require research and careful planning. The cost of education and living varies from country to country. For instance, education in the US or UK is, in general, more expensive than in Canada or Australia. And the university funding is easier to get in the United States than in the UK, Canada, Australia or New Zealand. Most students who go to Australia and the UK are self funded students. Further, even within the country, as in the US, there are substantial differences in costs, depending on whether the university is a public or a private one and again the location of the university. Costs also depend on the type and duration of the program.

Generally scholarships at the undergraduate level are not easy to come by. In the absence of scholarships, banks come to the rescue of students as the foreign nationals are required to show proof of sufficient funds to cover at least the first year of their college education to apply for a student visa. Students can avail loans for study at almost any university, as banks generally check with the respective high commissions who have an accredited list of universities with them before sanctioning the loan. The time period for sanctioning the loan could be between 15-30 days. This should be kept in mind, as it is essential to have all financial documents in place when applying for the visa.

Banks can also issue the capability certificate for students going abroad for higher studies since some of the foreign universities require the students to submit a certificate from their bankers about the sponsors solvency/financial capability, so as to ensure that the sponsors of the students going abroad for higher studies are capable of meeting the expenses till completion of studies.

Increasing awareness

In the banking sector, officials agree that since the past 4-5 years there has been a big offtake of educational loans. This trend has been fueled by changing mindset of the service class, which is opting to send their children abroad for higher education and the many upcoming private institutes, which offer more industry friendly courses albeit with a steep fee structure in the country. Although, presently most of such courses are in the engineering and management domain and very few in the life sciences segment. Experts feel that the growth in the educational loan sector has been about 100 percent though the volumes are still small. During the past year, the State Bank of India disbursed Rs 20-25 crore as educational loans in Delhi, whereas the total loan disbursed in Delhi in this segment by all banks was about Rs 50 crore. It is estimated that a total of Rs 200 crore was disbursed as educational loan in the country during the past year. Presently only about 0.5 percent of the student community is availing the loan facility from all the banks put together.

Although in the life sciences segment no particular trend for availing financial aid has been noted as yet, it likely to change as the industry matures.

Eligibility criteria

Most of the public sector banks like the Andhra Bank, Bank of India, Bank of Maharashtra, Canara Bank, State Bank of India, Syndicate Bank, among others and some of the private banks like HSBC offer educational loan schemes. It is the public sector banks that are bullish in this segment as they envisage playing an important role in developing this market. Their aim is to build a strong relationship with the younger generation and have them as their customers in the long term. Senior bank officials advice the students to do the necessary spade work before finalizing a course, regarding its suitability, placement opportunities before availing a loan.

However, the banks do not give these loans to everyone who applies for them. The first condition is that admission to professional/technical courses should be through an entrance test/selection process and the admission should be confirmed. Loans are not given for correspondence courses. And the past academic record of the loan seeker, if any should also be satisfactory. Anyone who fulfils these conditions is eligible for an educational loan which finances a range of expenses, apart from tuition fees, like: hostel, examination, library, laboratory fee; purchase of books, equipment, instruments, uniforms; caution deposit, building fund, refundable deposit supported by institution bills, receipt; travel expenses for studies abroad; purchase of computers essential for completion of the course; and any other expense required towards the completion of the course such as study tours, project work, thesis, etc.

Most graduate, post-graduate, professional courses (engineering, medical, veterinary, law, dental, management), and courses recognized by the University Grants Commission, the All India Council for Technical Education, and the Indian Council for Medical Research are eligible for loans. Most banks offer a maximum of Rs 7.5 lakh for courses within India and Rs 15 lakh for courses abroad. However, based on the nature of the course and the needs of the applicant, individual banks offer a higher amount on a case-to-case basis. For example, the State Bank of India (SBI) offers a maximum loan of Rs 15 lakh for courses in India and Rs 20 lakh for studies abroad, while HSBC Bank is one of the few banks, which provides loans of upto Rs 25 lakh.

Collateral

With a view to encourage higher education and popularize study loans there is no security deposit for a loan sum of upto Rs 4 lakh. Generally for loans between Rs 4.0- 7.5 lakh, there is a requirement of a third party guarantee and no further tangible security is required. However, during the pre sanction survey the financial credentials, like the proof of income, bank account statements, income tax returns of the guarantor are verified. For a sum exceeding Rs 7.5 lakh, a collateral security for the full/suitable value of the loan in the form of mortgage of property, house, bonds, securities, etc is mandatory.

The margin requirements on educational loans are not very rigid. It is 5 percent for studies in India and 15 percent for studies abroad for amounts exceeding Rs 4 lakh. The scholarship/assistantship promised to the students is included in margin. The margin money is calculated from time-to-time on the outstanding balance of the loan. This is brought on a year-to-year basis, as and when the disbursements are made on a pro-rata basis.

Disbursement process

After the mark-sheets, proof of selection/admission and scholarship to the course in question are shown to the bank officials and the amount of loan required, other sources of funding, collateral requirement and job prospects after the completion of the course are discussed, the completed loan application form along with the supporting documents is submitted. Generally, both the student and the parent/guardian act as co-applicants for the loan. The parent or guardian of the student, is required to furnish his bank account statement, tax returns of the last two years, statement of assets and liabilities and proof of income. If the bank decides to sanction the loan, then there is a pre sanction survey, where the authenticity of the documents submitted, financial credentials of the co-borrower and guarantor are verified. Most of the banks take just about 5 days to a week to sanction a loan after the submission of all the relevant documents. Both the student and the guardian execute the loan document, while it is disbursed in stages as per the requirement directly to the institutions/vendors of books/equipment/instruments. The banks do not charge a processing fee or upfront charges, although the State Bank of India requires a deposit of Rs 5,000 for education loan for studies abroad, which is adjusted in the margin money.

Repayment terms

The repayment period is normally five to seven years. The repayment commences one year after the completion of the course or six months after securing a job, whichever happens earlier. This is known as the moratorium period. During this period, simple interest is computed. On commencement of the repayment, interest is charged on the total outstanding balance (principal plus accrued interest) in the loan account. Accrued interest gets added to the principal amount and Equated Monthly Instalments (EMIs) are fixed on the total outstanding amount. However, a one percent interest concession may be provided if the interest is serviced during the study period when repayment holiday is on.

The interest rates on these loans are usually on a floating basis. They are linked to the lending rates of the bank and are called PLR or Prime Lending Rate. While lending higher sums of money normally the banks charge one percent more than the existing PLR rate. Presently, most of the banks provide loan at the rate of 10.5 percent interest upto Rs 7.5 lakh and 11.5 percent interest on amounts more than that.

In the case of non-repayment, a penal interest at the rate of 2 percent is charged for the overdue amount and the overdue period. Where as, if due to some reason, the student is not able to complete the course within the scheduled time, an extension of 1-2 years, based on the discretion of the bank given to the student. While pursuing the course, the bank tracks the academic performance of the student and they are required to submit their result sheets to the bank every year.

Unlike other loans, education loans do not attract pre-payment penalty. The student can pay off the entire outstanding loan amount before the closure of the tenure too.

Special packages

In many cases banks also tie-up with educational institutes to offer comprehensive loan packages to students. This saves students some of the procedural hassles involved with getting the loan sanctioned.

The State Bank of India has a special "SBI Scholar" scheme through which it offers in 50 identified institutes across the country like all the Indian Institute of Technology, Indian Institute of foreign Trade, Delhi College of Engineering, The All India Institute of Medical Sciences, Indian Institutes of Management direct loans to the students without the involvement of a co-borrower. Similarly the HSBC has tied up with the Indian School of Business.

Allahabad Bank offers loans at interest rates, which are 200 basis points lower than the PLR for students of IIMs, IITs and

professional courses.

For those looking to study abroad, SBI has a special scheme as it has tie-up with Thomas Cook. Thus along with the loan, one can get instant wire transfers, foreign currency drafts, travellers' cheques, and insurance.

Thus banks are working as active partners with students to help them realize their dreams and make the road to success a little smoother for them.
