Auriga Research signs MoU with Assam Government to establish pharma testing lab

10 March 2025 | News

Government of Assam will provide policy support, fast-track clearances, and facilitation services

Auriga Research Private Limited, a trusted Indian leader in Testing, Inspection, and Certification (TIC) services, has signed two significant Memoranda of Understanding (MoUs) aimed at strengthening Assam's food, pharmaceutical, and tea industries.

The two agreements, signed with the Government of Assam and the Tea Research Association (TRA) during the Advantage Assam 2.0 Investment and Infrastructure Summit 2025, mark a transformative step toward enhancing quality assurance, regulatory compliance, and global competitiveness for Assam's industries.

Auriga Research has partnered with the Government of Assam to establish an advanced testing laboratory for food, beverages, pharmaceuticals, Ayurveda, and medical devices. This state-of-the-art facility will be set up in Guwahati or Dibrugarh, with operations expected to commence within nine months. It will cater to both domestic businesses and export-driven industries, ensuring compliance with national and international quality standards.

The Government of Assam will provide policy support, fast-track clearances, and facilitation services to ensure smooth implementation. This initiative aligns with Assam's Ease of Doing Business (EoDB) policies and will further integrate the state into global supply chains, supporting India's Make in India and Make for the World initiatives.

Auriga Research will provide cost-effective, world-class testing solutions to producers, even small and mid-sized players to ensure compliance with stringent international regulations.
