Discussion with Industry Experts on AI in Life Sciences

23 March 2025 | Features

A perspective on how AI is reshaping industries, particularly life sciences and healthcare

A group of experienced professionals from the Kellogg School of Management in the US, led by Prof. Mohanbir Sawhney, Associate Dean at Kellogg, recently visited Axtria's office in Gurugram. The students, each with over 10 years of industry experience, brought diverse perspectives on the evolving landscape of data, digital innovation, and AI.

BioSpectrum had the opportunity to interact with Prof. Mohanbir Sawhney and Manish Mittal (Head of Global Delivery at Axtria, and India Country Head, Axtria) on the topic: "AI in Pharma & Life Sciences: What's Happening Now and the Way Forward." This conversation, enriched by the global insights of these stalwarts and the on-ground perspectives of visiting Kellogg professionals, focused on the current trends and future potential of AI in the sector.

We spoke about how AI is reshaping industries, particularly life sciences and healthcare; What are some real-world examples where AI has significantly improved decision-making in life sciences and healthcare; How AI is helping businesses bridge the gap between raw data and strategic decision-making; and what are the future breakthroughs in AI-driven decision-making in the next five years.
