Medyseva introduces IoT-powered medicine dispensing solution

10 April 2025 | News

Designed to provide real-time stock updates, and enable cashless transactions

Medyseva, an Indore-based startup, has unveiled MedyVend, an IoT-powered automated medicine dispensing kiosk. Medyseva is on a mission to revolutionise rural healthcare through its innovative phygital model, which seamlessly integrates digital telemedicine, physical clinics, strategic hospital partnerships and now the AI-powered MedyVend medicine dispensers.

The introduction of MedyVend, an IoT-powered, 24/7 automated medicine dispensing kiosk, further strengthens the ecosystem by eliminating barriers to medicine access in remote areas—allowing patients to instantly receive prescribed medications without relying on traditional pharmacies.

Medyseva's expanding network now serves between 1.7 and 2.6 lakh people across Bhopal, Indore, Ujjain, and surrounding regions, setting a new benchmark for last-mile healthcare delivery in India.

The IoT-enabled MedyVend kiosks are designed to provide real-time stock updates, enable cashless transactions, and integrate with teleconsultation services. Doctors can prescribe medications remotely, which are then dispensed instantly by MedyVend, ensuring patients receive accurate and timely treatment.

Medyseva aims to expand the MedyVend model nationwide, partnering with hospitals, NGOs, and government initiatives to ensure widespread adoption. Future advancements will include AI-powered diagnostics and automated medicine recommendations, further enhancing rural healthcare delivery
