US-based MicroPort Orthopedics launches implants and technology in India

14 April 2025 | News

Unique design has achieved clinical success worldwide

MicroPort Orthopedics Inc., a US headquartered global medical devices company, has announced the introduction of its flagship second generation solution, the Evolution Medial-Pivot Knee in India. This innovative solution is designed to deliver superior flexion stability, anatomic motion, and wear-limiting design, replicating the natural stability and motion of the knee to allow superior patient outcomes after total knee replacement surgery.

The Evolution Medial-Pivot Knee has received positive feedback from surgeons and patients worldwide. This unique design has achieved clinical success worldwide, with documented 98.8% survivorship at 17 years and a 95% patient satisfaction rate. With over 25 years of documented usage, MicroPort Orthopedics' line of Medial-Pivot products have been used in over 1,000,000 cases in 70 countries worldwide.

MicroPort's in-house international experts recently trained Indian surgeons across many cities with meticulously planned educational sessions and on-site support for surgeries through a professional team. This launch will now allow access for Indian patients to globally renowned cutting-edge technologies, addressing patient concerns like a feeling of instability while climbing up or down the stairs and an overall discontent with the post operative knee feeling unnatural.

With this focus on professional training for healthcare professionals, MicroPort Orthopedics actively provides the latest scientific insights and surgical techniques through its online to on- site platform called Joint Academy, which is a global initiative aimed at providing best-in-class medical education through international key opinion leaders.
