Worldâ??s first USFDA cleared microneedling pen launches in India

17 April 2025 | News

The system is powered by patented Intuitive Speed Control Technology

Skinwood Luxury Aesthetic Centre has announced the official Indian launch of SkinPen Precision, the first US FDA-cleared microneedling device, marking a groundbreaking advancement in the field of aesthetic dermatology.

This revolutionary treatment is now available exclusively at Skinwood Luxury Aesthetic Centre, reinforcing the clinic as a pioneer of dermatological innovation and patient-first care.

Developed by Crown Aesthetics, USA, SkinPen Precision is a state-of-the-art microneedling system that harnesses the body's natural wound healing process to improve skin texture and tone. It is designed to treat a wide range of skin concerns including acne scars, fine lines, wrinkles, surgical scars, stretch marks, skin laxity, enlarged pores, and uneven pigmentation. It has already earned global trust as the gold standard in microneedling technology.

The system is powered by patented Intuitive Speed Control Technology, ensuring optimal performance across varying skin thicknesses while maintaining a consistent 7,000 RPM. The ultrasonically sealed handpiece prevents blood or fluid backflow, reducing any risk of cross-contamination, and its unique Advanced Cartridge Unit features 14 medical-grade stainless steel needles designed for precision and durability.

As the first device of its kind to receive this approval, it has undergone rigorous safety and efficacy evaluations, giving both practitioners and patients confidence in its performance. This launch elevates the standard of care in aesthetic dermatology across India, setting a new benchmark for results-driven treatments backed by clinical research.
