Kaya's Artiqa offers non-invasive breakthrough in tackling obesity and body contouring

19 June 2025 | News

Advanced hot-cold therapy and EMS technology offers visible inch-loss

Kaya, India’s leading dermatology and aesthetic care brand, has launched Artiqa, a next-generation aesthetic device from Italy designed to help tackle stubborn fat and body contouring challenges.

By combining thermal hot and cold therapy with Electro Muscle Stimulation (EMS), Artiqa offers a safe and effective way to reduce inches, tone muscles, and rejuvenate skin—all without pain, needles, or downtime. It’s a breakthrough solution for those looking to manage weight, shape, and skin health—naturally and non-invasively.

As more Indians look for beauty treatments that are effective yet gentle, Artiqa brings an advanced solution backed by medical-grade safety and clinical precision. Whether it is firming up the skin, reducing cellulite, toning muscles, or speeding up postpartum recovery, Artiqa provides visible improvement without surgery or downtime.

The CE-certified device (Class IIb) uses smart temperature sensors to ensure comfort and safety during each session. It also improves lymphatic drainage, boosts collagen production, and helps with cryofacials, making it ideal for fitness lovers, new mothers, and anyone wanting natural-looking, anti-aging results.

With Artiqa, Kaya is raising the bar in non-invasive aesthetic care and bringing international technology to Indian clinics, while ensuring the highest standards of comfort, safety, and results.
