Flebo.in introduces free AI-powered digital health record storage

24 July 2025 | News

Enables users to store and access medical reports from multiple labs on fingertips

Gurugram-based startup Flebo.in, a one-stop destination that allows convenient booking of both radiology and pathology tests from any lab of the customer's choice, has launched a new free artificial intelligence (AI)-powered digital health vault, enabling users to upload, store, and analyse lab reports from any diagnostic lab.

The new service allows patients to consolidate scattered medical records, track health trends over time, and receive AI-driven insights and doctor suggestions—all without any cost.

Backed by Ajay Singh, Chairman and Managing Director, SpiceJet, in his personal capacity, Flebo.in now lets users upload their health reports from any lab, including third party, and secure them in an online data vault free of cost. They can access these reports anytime, anywhere on their mobile phones by simply logging into their Flebo.in account.

As soon as a report is uploaded, Flebo.in uses artificial intelligence to instantly and automatically analyse the report. It shows users the parameters that are out of range, provides an AI based analysis, which includes recommendations for lifestyle and doctor recommendations. It adds all major tested parameters to the Health Trend Graphs to see all the values for that parameter across all tests, conducted at different times in one graph, without needing to look through multiple reports. Flebo.in then sends recommendations for future tests at the appropriate time, thus ensuring timely diagnosis and treatment.
