HUMETA raises $2 M in Pre Seed funding round for global expansion

15 August 2025 | News

AI-based healthcare content creation platform â??HUMETAâ? goes global

HealthPresso TechnoMedia has announced that the services of its artificial intelligence (AI)-based healthcare content creation platform “HUMETA” goes global and will now be available in the UAE and the US.

To fund the expansion, the company is raising $2 million in its pre seed funding round after successfully completing an Angel Investing round of $300k in July 2025.

The platform delivers multi-format, multilingual, regulation-ready content for every medical specialty from CME modules and discharge summaries to patient explainers and scientific publications, all aligned with FDA, EMA and CDSCO guidelines.

Trained on over 3.5 million verified medical datasets and built on proprietary Retrieval-Augmented Generation (RAG) architecture, HUMETA is designed for medical precision, according to HealthPresso TechnoMedia which created HUMETA.

"With our expansion, we're now enabling content creation at the point of care in UAE through hospital networks, clinics and standalone specialty centres and in the USA, where we're working with medical associations and pharma brands to ensure every piece of healthcare communication is grounded in accuracy and governance." said Daleep Manhas, CEO & Co-Founder of HUMETA.

According to HealthPresso TechnoMedia, only 15–20 percent of doctors actively contribute to health content management, with nearly 10 million out of 12 million physicians remaining passive.

In India, fewer than 5 percent of 1.2 million registered allopathic doctors create content, despite the country producing over 50,000 new MBBS graduates each year.

This participation gap restricts the impact of pharma, hospital and Med-Tech communications, adding HUMETA is purpose-built to activate this silent 80 percent.
