

Leucine Rich Bio introduces India's first skin microbiome centric healthcare product

15 August 2025 | News

Restores microbiome harmony to reduce redness, sensitivity, and breakouts

Bengaluru-based Leucine Rich Bio, South Asia's pioneering microbiome company, has launched Rychbiome Microbiome Balancing Cream, marking a significant milestone in probiotic skincare.

This first-of-its-kind product is crafted to support skin health by help improving/restoring skin microbial balance, enriching hydration, and promoting barrier resilience.

Unlike traditional skincare products that focus on the superficial layer, Rychbiome delivers a composition that can support the skin's ecosystem from within, aligning with Leucine Rich Bio's vision of microbiome-based wellness. This cream is suitable for all skin types and designed for daily use.

Prabhath Manjappa, Co-founder and CPO of Leucine Rich Bio, said, "Our skin is its own microbiome ecosystem, and we cannot ignore its microbial harmony. Rychbiome is a breakthrough, the first cream in India built on microbiome science, designed to recalibrate and support skin from the microbial level, not just the surface."
