

Nethradhama partners with London Vision Clinic to strengthen ophthalmic education in India

24 September 2025 | News

Course will provide ophthalmologists and trainees with a comprehensive understanding of contemporary refractive surgery

Nethradhama Super Speciality Eye Hospital collaborates with London Vision Clinic (LoVC), to conduct the Forefront Refractive Surgery Course (APAC Edition) in Bengaluru.

The course is aimed at advancing ophthalmic education by enhancing the skills of practitioners in refractive surgery through structured training and international knowledge exchange.

The six-day surgical fellowship programme scheduled from September 26 to October 1, 2025 will cover LASIK, PRESBYOND Laser Blended Vision, and SMILE, focusing on practical aspects such as patient selection, surgical technique, complication management, and long-term treatment planning.

The course will provide ophthalmologists and trainees with a comprehensive understanding of contemporary refractive surgery, thereby enabling them to integrate these procedures into practice with greater precision and confidence.

It will be led by renowned faculties, including Professor Dan Z Reinstein, Medical Director of London Vision Clinic; Prof Dr Sri Ganesh, Chairman and Managing Director of Nethradhama Super Speciality Eye Hospital; and Dr Supriya Samak Sriganesh, Executive Director of Nethradhama Super Speciality Eye Hospital.

The programme further extends beyond theoretical learning by incorporating video-based demonstrations and in-depth case discussions, enabling participants to engage directly with the finer aspects of surgical practice.
