Greenspace Herbs opens US base as global demand surges for 'Quantum Ayurveda'

16 December 2025 | News

New Jersey office to handle customer relationships and market development

Greenspace Herbs, which is based in Bengaluru, has opened a full-scale US office in New Jersey. This is a big win for India's wellness sector and a big step forward for Indian innovation in the global nutraceutical industry. The expansion comes as international supplement brands rush to secure a supply of the company's proprietary "Quantum Ayurveda" ingredients – all manufactured in India.

While the New Jersey office handles customer relationships and market development, all core manufacturing, research, and quantum processing remain based in Bengaluru.

Greenspace has put a lot of money into Indian infrastructure because of the rise in global demand. This includes building more quantum-loading suites, higher-throughput analytical systems, AI-driven quality controls, and bigger research facilities in Bengaluru. The business is also getting Indian scientists who work abroad to come back home because they see chances to work on cutting-edge projects that mix traditional knowledge with quantum science.

Unlike conventional herbal processing, which focuses solely on chemical standardisation, Greenspace applies controlled energy fields to "tune" herbs to specific frequencies in its Bengaluru laboratories. The process uses acoustic fields and calibrated energy inputs in shielded chambers, maintaining the herb's natural chemistry while altering its energetic state to enhance how the body recognises and responds to herbal compounds.
