# Swisslog Healthcare strengthens APAC growth ambitions with strategic expansion in India

29 January 2026 | News

**To address the growing demand for advanced pharmacy management solutions**

Swisslog Healthcare, a global leader in pharmacy automation and delivery transport, has announced a strategic expansion of its India operations to address the growing demand for advanced pharmacy management solutions across the region.

Headquartered in Gurugram, this expansion brings proven automation technologies closer to Indian healthcare providers, enhancing accuracy, traceability, patient safety, and operational efficiency across hospitals and pharmacy operations.

Swisslog Healthcare is rapidly expanding its footprint across Asia Pacific (APAC), with offices in Singapore, Malaysia, Thailand, and now India. To help hospitals in India navigate increasing operational complexities and cost pressures, Swisslog Healthcare will offer a comprehensive pharmacy technology portfolio spanning transport automation (TranspoNet pneumatic tube), pharmacy automation (BoxPicker® EvoTec® PillPick® Octave, UniPick®) and cold-chain solutions (TenutÅ•).

Designed to support both inpatients and outpatients care, these globally proven solutions are highly relevant to India's scale, demographics and evolving healthcare needs. Together, these solutions will enable healthcare providers to improve efficiency, enhance medication safety, and deliver consistent patient-centric care at scale.

With one of the world's largest hospital networks and a rapidly expanding healthcare infrastructure, India faces a growing demand for healthcare automation. As hospitals scale capacity and accelerate digital adoption, the need for intelligent patient-centric automation has become increasingly evident.
