Enhancing patient outcomes through clinical research

The Indian Society for Clinical Research (ISCR), an association of clinical research professionals, recently hosted its 19th Annual Conference in Delhi, bringing together more than 1900 individuals and 285 eminent speakers to explore how digital innovation, global collaboration and regulatory excellence are shaping the future of patient-centric clinical research in India.

Centered on the theme, “Accelerating Clinical Research in India through Digital Innovation, Global Collaboration and Regulatory Excellence for Patient-Centric Value Creation” the event convened clinical researchers, Indian and Global pharmaceutical, medical diagnostics, R&D companies, research trainees and startups.

Industry experts and thought leaders including Dr Jerin Jose Cherian (Indian Council of Medical Research), Dr Sudeep Gupta (Tata Memorial Centre), Dr Y K Gupta (AIIMS - Jammu and Bhopal), Dr Suman Karanth (Fortis Memorial Research Center), Dr Upendra Kaul (Batra Hospital), Dr Ganesh Dakhale (AIIMS) and Gaurab Chakraborty (Veramed) participated in discussions on emerging trends, evolving regulatory frameworks, and the growing role of digital technologies in clinical research.

Additional speakers at the event included representatives from leading companies like Sun Pharma, Pfizer, IQVIA, Dr. Dangs Lab, City Imaging & Clinical Labs, CRNI, Abiogenesis Clinpharm, NOVOTECH, ADVARRA, DiagnoSearch Life Sciences, Thermo Fisher Scientific, Fortis, etc. to name a few.

Key sessions focused on global clinical development, operational rigor in clinical research in line with development of clinical trial sites, regulatory efficiencies and harmonization, global collaboration, data integrity, innovation and patient centric research models, highlighting opportunities for India to further strengthen its position as a preferred source of high quality clinical research.

Sharing her thoughts about the importance of clinical research in India, President of ISCR, Dr.Seema Pai said, “India’s clinical research ecosystem is undergoing a significant shift driven by rapid advances in digital technologies, data-led research models and a growing focus on patient-centric trial design. Together, these developments are enabling more efficiency, inclusiveness and scalable clinical research, while also strengthening patient engagement and trust across the research lifecycle.”

She also added, “Recent regulatory reforms and policy measures, including continued emphasis on healthcare, innovation, and research in the Union Budget, reflect India’s strong commitment to building a globally aligned and future-ready clinical research environment."

The conference concluded with a shared sense of purpose among participants, by emphasising the importance of working together to turn ideas into action.
