ILS Hospitals partners with MedLern to transform healthcare workforce learning

21 April 2026 | News

GPT Healthcare adopts MedLern's AI-powered continuous learning platform to strengthen clinical excellence

GPT Healthcare, operator of ILS Hospitals, has announced a strategic partnership with MedLern, an AI-enabled digital learning platform for healthcare. The collaboration marks a significant step in ILS Hospitals' digital transformation journey, reinforcing its commitment to clinical quality, operational excellence, and patient outcomes.

As healthcare delivery in India grows more complex, the need for continuous upskilling has become critical. Through this partnership, ILS Hospitals will embed structured, role-specific, and measurable learning into daily operations across clinical and non-clinical teams.

MedLern's platform will enable deployment of curated clinical content, real-time competency tracking, and continuous learning across nurses, clinicians, and administrative staff. Its phygital training modules combining physical and digital simulation are designed to support excellence in fast-paced healthcare environments.

The platform will be implemented across ILS Hospitals' facilities in Kolkata (Dumdum, Howrah, and Salt Lake), as well as Agartala and Raipur. In the first phase, it will cover thousands of clinical and non-clinical employees, with plans for network-wide expansion in subsequent phases as part of GPT Healthcare's broader digital transformation roadmap.
