Academy of Digital Health Sciences launches two new courses in AI

07 May 2026 | News

To democratise AI across global healthcare systems

Mumbai-based Academy of Digital Health Sciences (ADHS) has announced the launch of its landmark 'AI for All' Mission, a bold, mission-driven programme designed to democratise artificial intelligence (AI) across global healthcare systems.

As part of the 'AI for All' rollout, ADHS has announced two landmark educational offerings that extend its already unmatched portfolio of digital health programmes:

Certified Digital Health Officer (CDHO)

A rigorous, recognised certification designed for senior healthcare professionals, administrators, and policy leaders who are responsible for driving digital transformation within healthcare organizations. The CDHO programme equips leaders to architect, govern, and sustain digital health ecosystems at institutional, regional, and national scale. This is being offered jointly by Indian Institute of Management, Raipur and Academy of Digital Health Sciences. This will entitle participants to have IIM Executive Alumni status.

Post-Graduate Course in Digital Health and Public Health-World-First Tripple Certification: ADHS – IIM Raipur – PHFI University

A comprehensive post-graduate programme bridging the disciplines of digital health and public health- two domains whose convergence is defining the future of population health management. This programme addresses epidemiology, health informatics, AI-driven surveillance, digital therapeutics, and systems-level public health strategy in an integrated, practice-oriented curriculum. This global programme will be available immediately and is a result of the partnership between Academy of Digital Health Sciences with IIM Raipur and PHFI institute of Public Health Sciences, deemed to be University. It will be offered in a blended learning format with an in-campus immersion at IIM Campus, PHFI and Academy of Digital Health Sciences hosted Global Digital Health Summit.
